

# BioCelerate Newsletter

June 2020

This edition of the BioCelerate newsletter includes updates on our initiatives and upcoming events.

## Latest Updates:

### Common Template for Nonclinical Studies

**New in the virtual world:** The team's Society of Toxicology (SOT) 2020 poster on Nonclinical Protocol Harmonization was presented virtually at this year's conference. View the poster online or on [BioCelerate's website](#).

**Project kick-off!** The Nonclinical Study Report Template (NSRT) project launched in April with a virtual roundtable that included representation from key stakeholders involved in the management, creation and review of study reports. The NSRT will be drafted as a companion template to the Nonclinical Protocol Template that is currently available for download at [www.biocelerate.org](http://www.biocelerate.org). Stay tuned for additional opportunities to provide input to the draft NSRT via our website this summer.

### SEND Harmonization for Cross-Study Analysis

**Recent virtual conference sessions:** The team's SOT 2020 Poster, "Using SEND Data Sets to Enable Large-Scale Data Analytic Approaches for Preclinical Toxicology Data," was presented virtually. This poster shares the team's important work to develop search scripts that identify issues impairing cross-study analysis in preclinical toxicology studies. View the poster [online](#) or on [BioCelerate's Website](#).

On June 16, BioCelerate's SEND for Cross-Study Analysis Initiative Lead, **Todd Page (Eli Lilly)** chaired a session at DIA's Virtual Annual Global Meeting, "Next Generation Analytics: Harnessing the Power of Nonclinical SEND Datasets to Improve Success in Early Clinical Development". The session, which included a presentation from **Kevin Snyder (US FDA)** on the team's cross-study analysis work, was followed by a dynamic panel discussion around the current challenges of using SEND datasets for cross-study analysis.

## Upcoming Events:

 VIRTUAL MEETING

### Japanese Society of Toxicology 2020

June 29-July 1, 2020

Check out Symposium 27 on Wednesday, July 1. BioCelerate member **Tamio Fukushima (Shionogi)** will present, "Using SEND Datasets to Enable Large-Scale Data Analytic Approaches for Preclinical Toxicology Data". Program and registration information can be found [here](#).
